ABSTRACT:

PURPOSE: To mechanize the mechanical and quantitative production and sales control or settlement of accounts for meal cost at a low cost by providing a bar-code or a matrix code being fit for long period use on the side face or the bottom face of tableware as prescribed by changing a little a conventional external appearance shape.

CONSTITUTION: For instance, bar-codes 3A, 3B are formed by printing a bar-code as prescribed on bottom face 4, 6 of recessed parts 2, 3 provided in the prescribed part of the surfaces (side face and bottom face) of a bowl 1. As for a printing means, for instance, a convex face-like impression formed by a soft silicone rudder member is used, and tampo printing for transferring ink printed like a bar-code to concave faces 4, 6 is used. Also, a prescribed transparent resin member is printed or applied by superposing it on the bar-

codes 3A, 3B for the purpose of wear resistance or scratch resistance or water resistance.
